

The WLD+211T Network Player is a stand-alone audio component that can integrate into your existing hi-fi set up, much the same as a traditional radio tuner except it comes with all the advanced technology necessary to integrate with your digital music storage system. Once connected to your home network router (via Wi-Fi or Ethernet cable connection), it will give you access to over 16,000 digital radio stations via the internet as well as access to the **SPOTIFY CONNECT** subscription based streaming service. Finally, you can listen to any of the music tracks stored on your computer or network attached storage (NAS) drive by 'streaming' directly to the unit. The WLD+211T also features our **Sound Shaper** DSP, specifically designed to get the best playback from compressed music files, including the compressed streams from radio and Spotify. With its full colour TFT screen, station ident info and album artwork are displayed. In addition to the remote control handset that comes with it, if you own an Android or Apple OS device you can download the free UNDOK remote control app, allowing you to browse all of your music from the palm of your hand. Available in silver or black finish.

### KEY FEATURES

- Live Internet radio broadcasts and Podcast on-demand content
- DLNA music streaming with playlist capability
- Spotify Connect streaming subscription service.
- Wi-Fi (802.11b/g) & Ethernet Connection with Push Button WPS security for hassle free setup.
